

REVIEW
of the educational professional program "Ecology"
of the State Institution "Luhansk Taras Shevchenko National University"
for applicants for the second (master's) level of higher education
in the field of knowledge 10 Natural sciences, specialty 101 Ecology

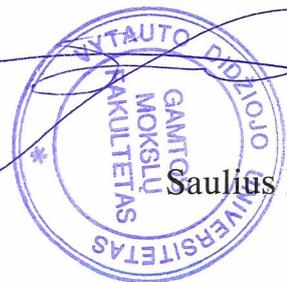

An integral part of the higher education system in Ukraine is the training of highly qualified professionals, in particular, in the field of ecology and environmental protection. The proposed educational and professional program takes into account the current laws of Ukraine's "On Higher Education", has educational, professional and scientific components, amounting to a total of 90 ECTS credits.

The program provides for mastering the integral program of the cycle of disciplines of general and vocational training, contains current requirements for professional competencies and program learning outcomes for the ability to carry out qualified and error-free activities when performing measures to analyze the state of the environment. The structure and content of the educational professional program confirm the availability of all the necessary educational components and contains general information, the purpose and characteristics of the work, a description of suitability for employment, a list of general and professional competencies, program learning outcomes. The program learning outcomes provided for by the educational and professional program are provided through the study of the following disciplines: " Systematic Analysis of Environmental Quality", "Environmental Project Management", "GIS Technologies in Environmental Studies", "Environmental Management and Audit", "Strategic Environmental Assessment".

However, in the context of the European integration processes of Ukraine, an essential aspect in the preparation of future masters in ecology is also a confident knowledge of European requirements in the field of environmental protection, with a view to their future implementation on the territory of Ukraine, therefore, I consider it appropriate to include in the program such an educational component as e.g. "International Environmental Policy".

In general, I believe that the declared educational and professional program of the second master's level in specialty 101 Ecology may be recommended for the preparation of applicants for higher education.
